...and saving energy

A refrigeration unit is a haven for bacteria, viruses, moulds and fungus. The problem arises when the unit's coiler become damp, while air condenses as the temperature falls. The damp environment on the coiler surface provides perfect growth conditions for the microorganisms.

The Standard UV Light Kit is ideal for applications where supports already exist. This system effectively kills mold, bacteria, and viruses in HVAC equipment. You will save energy by keeping the system cleaner, lowering maintenance costs. In contrast to sporadic cleaning, UVC system is based on an automatic and continuous cleaning method, which is largely maintenance-free.

- Normal or high output lamp options for surface and/or air treatment
- High quality water-resistant lamps
- Water-resistant multi power supply with lifetime warranty
- Includes all necessary mounting hardware

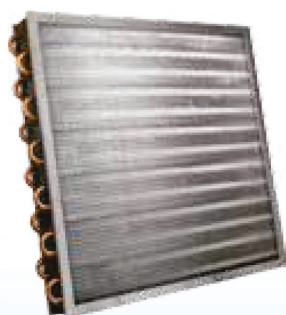

Bennefits

- Kills mold, bacteria, and viruses in the HVAC system
- Saves energy by keeping components cleaner
- Lowers maintenance costs – reduced required cleanings
- Cost effective
- Less sickleave
- Increased food safety

Coils with Mold

Coils with UV Light

UV-C light supresses microbial growth on HVAC coils and surrounding areas
